DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Attorney Aslan Ettehadieh (Reg. No. 62,278) on March 3, 2010.

The application has been amended as follows:

In the Title:

The title has been changed to: "Liquid crystal display panel and manufacturing method thereof."

In the Claims:

Claim 12 has been amended in lines 1-2 from "A substrate with a spacer comprising a substrate; and a spacer formed on said substrate," to "A liquid crystal display panel comprising a substrate and a spacer; and the spacer formed on said substrate,".

Claim 14 has been amended in line 1 from "The substrate with the spacer according to claim 12" to "The liquid crystal display panel according to claim 12".

Claim 15 has been amended in lines 1-2 from "A panel having the substrate with the spacer according to claim 12" to "The liquid crystal display panel according to claim 12".

Claim 16 has been amended in line 1 from “The panel according to claim 15” to “The liquid crystal display panel according to claim 15”.

Claim 17 has been amended in lines 1-2 from “A method of manufacturing a panel according to claim 16” to “A method of manufacturing the liquid crystal display panel according to claim 16”.

End of examiner’s amendment.

Allowable Subject Matter

3. Claims 4, 12, and 14-17 are allowed.
4. The following is an examiner’s statement of reasons for allowance:

The closely related prior art, Cho et al. (US 20040114087) discloses a liquid crystal display panel comprising: two substrates (10, 20) fixed together by a seal member (310) with their main surfaces opposed to each other; liquid crystal (3) sealingly stored in a region surrounded by said two substrates and said seal member and a plurality of columnar spacers (320) arranged in the region surrounded by said two substrates and said seal member, wherein said columnar spacers include: a first columnar spacer (321), and a second columnar spacer (322) being higher than said first columnar spacer when receiving no load; said first columnar spacer is arranged in a first region near an inner side of said seal member and a second region located inside said first region; and said second columnar spacer is arranged in said second region (Fig. 2 below; Fig. 3).

FIG. 2

The prior art does not disclose the panel of claim 4, in particular the limitations that the height of the second column spacers being 45 percent of the width of the second column spacers, and the height of the first column spacers being 43 percent of the width of the first column spacers, each of said plurality of second column spacers being arranged at a rate of one spacer per ten picture elements, and each of said plurality of first column spacers being arranged at a rate of one spacer per fifteen picture elements.

The heights and widths of column spacers and the arrangement rates of spacers are known. Murouchi (US 6067144) teaches the heights and widths of column spacers (col. 3 lines 7-26). In addition, Cho et al. (US 20040114087) teaches arrangement rates of spacers (section 0013).

However, the prior art does not disclose or suggest the height of the second column spacers being 45 percent of the width of the second column spacers, and the height of the first column spacers being 43 percent of the width of the first column spacers, each of said plurality of second column spacers being arranged at a rate of one spacer per ten picture elements, and

each of said plurality of first column spacers being arranged at a rate of one spacer per fifteen picture elements. Claim 4 is therefore allowed.

In addition, the prior art does not disclose the substrate of claim 12, in particular the limitations that the upper portion of said first spacer portion having a groove surrounding said second spacer portion in a plan view, and the width of the groove being in the range of from $0.2\mu\text{m}$ to $2\mu\text{m}$.

The closely related prior art, Miyazaki et al. (US 5969784) discloses a spacer (3), wherein said spacer has at least a first spacer portion and a second spacer portion formed above said first spacer portion (Fig. 3). Miyazaki lacks the upper portion of said first spacer portion having a groove surrounding said second spacer portion in a plan view, and the width of the groove being in the range of from $0.2\mu\text{m}$ to $2\mu\text{m}$. As shown in Fig. 3 below, the examiner considers the indent as not being a groove.

FIG. 3

The examiner interprets the groove to be a long narrow furrow or channel. Claim 12 is therefore allowed, as are the dependent claims 14-17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
